ISASP Infrastructure Trial

For those that were able to attend our Technology Readiness Training over the past two weeks, thank you for joining us to learn about your role in the Spring 2019 Iowa Statewide Assessment of Student Progress (ISASP). As discussed during training, this week we are inviting you to conduct a local Infrastructure Trial at your school/district. The local infrastructure trial will run 10/15 - 10/19.

This local infrastructure trial is a "mini dress rehearsal" for online testing. It does not use real student information, and is completed in the PearsonAccess^Next Training Site. This is a low-stakes, dry run for confirmation that TestNav is configured correctly, your devices can successfully run TestNav, and your network can bear the full load.

For your reference and instructions on how to conduct a local infrastructure trial, you can access the full PowerPoint presentation that was shared during training at the ISASP Portal under the Technology Readiness Training section on the Technology Setup page.

If your school/district has not yet completed your Technology Readiness initial Survey, please use the included link to provide information about your district/school.

If you do not have a PearsonAccess^Next training account, please contact ISASP Customer Support by calling (833) 878-7041 or submitting a ticket. *(Pearson will need your First and Last Name, email address, and district or school name - or 4-digit code - to create your account)*

For assistance with your local infrastructure trial or any technology setup questions, please contact us at (833) 878-7041 or schedule an appointment using the Technology Office Hours found on the Technology Setup tab of the ISASP Portal.
